

# WEARIFY

FOR LEGAL REVIEW · PRE-LAUNCH

## Where We Use **Customer Data** — Module by Module

A simple walkthrough of which part of the platform touches which customer data, and where it goes.

## OVERVIEW

# The Six Modules — at a Glance

Wearify is one platform with six different apps. Each touches different customer data.

|                                    |                               |                              |                                    |                                    |                                 |
|------------------------------------|-------------------------------|------------------------------|------------------------------------|------------------------------------|---------------------------------|
| <b>Customer</b><br>Mobile App (/c) | <b>Kiosk</b><br>Smart Mirror  | <b>Tablet</b><br>Sales Staff | <b>Store</b><br>Retailer Dashboard | <b>Tailor</b><br>Tailor Portal     | <b>Admin</b><br>Mission Control |
| Their own profile, looks, wishlist | Body scan, AI try-on, consent | Customer lookup, shortlist   | Customer list, campaigns           | Receives name, phone, measurements | System-wide oversight           |

**Two modules need the most legal attention:** the **Kiosk** (because it captures the body-scan photo) and the **Tailor Portal** (because customer measurements + phone leave the platform to an external partner).

## THE DATA ITSELF

# All Customer Data We Collect

## Identity

- Name
- Phone number
- Email (optional)
- Date of birth
- Gender
- City

## Body & biometric SENSITIVE

- **Body-scan photograph**
- Profile photo (face)
- Height
- Body measurements (bust, waist, etc.)

## Behaviour & preferences

- Visit history per store
- Try-on looks (the AI images)
- Wishlist & wardrobe
- Loyalty points & tier
- Preferred fabrics / colours / occasions

## Authentication

- Hashed password / OTP
- Session tokens (per device)

## Consent & preferences

- 4 consent flags (history, messages, AI personal, photos)
- Date consent was granted
- Notification preferences

## Commerce

- Orders (items + totals)
- Tailor orders (with measurements)
- Feedback & ratings

## MODULE 1 OF 6

# Customer Mobile App (/c)

Used by the end customer — on their own phone, at home.

**COLLECTS**

- Phone + OTP
- Name, DOB, gender, city, email
- Height (cm or ft/in)
- Profile photo
- Preferred occasions, fabrics, colours, budget

**SEES & USES**

- Their own profile
- Their visit history across stores
- Their try-on looks (AI images)
- Their wishlist & wardrobe
- Their loyalty points & tier

**SENDS OUT**

- Nothing to third parties
- All data goes only to the Wearify backend

**Key fact for lawyer:** this is the customer's own account — but there is currently **no "delete my account"** button.

## MODULE 2 OF 6 · MOST DATA-SENSITIVE

# Kiosk — the Smart Mirror

Used by the customer in-store, in front of the AI mirror.

## COLLECTS

- Phone + OTP (or tablet code)
- Name + DOB (if new customer)
- **BODY-SCAN PHOTOGRAPH**
- Consent flags (4 of them)
- Feedback rating & comment

## SEES & USES

- Customer's previous looks
- Customer's wardrobe
- Store's saree catalog
- Staff PIN (for sign-in)
- Trial-room code from tablet

## SENDS OUT

- **Body scan + saree photo → RunPod GPU (US)**
- Order → store dashboard
- Looks stored in Convex

**Most important slide for the lawyer.** The Kiosk is where the **body-scan photo** is captured and sent to a US-based GPU service for the AI try-on. This is the platform's most sensitive data flow.

## MODULE 3 OF 6

# Sales Tablet

Carried by in-store staff while assisting customers.

**COLLECTS**

- Customer phone (to look up or register)
- Name, DOB, language (if new)
- Occasion & budget for the visit
- Staff PIN (4-digit)

**SEES & USES**

- Customer name, segment, visit count
- Customer's previous shortlist
- Store saree catalog
- Active staff sessions

**SENDS OUT**

- Trial-room code → customer (to enter on kiosk)
- Shortlist → kiosk session
- Tailor referral with customer name + phone → tailor

**Key fact for lawyer:** staff can **look up any customer by phone** at the store they belong to. This is the in-store equivalent of a CRM record.

## MODULE 4 OF 6

# Store Dashboard

The store owner's web dashboard.

## COLLECTS

- Store profile updates only
- Staff records (name, PIN, role)
- Saree catalog edits
- Marketing campaign content

## SEES & USES

- List of customers linked to the store
- Each customer's segment (VIP / Regular / At Risk / New)
- Customer Lifetime Value
- Last visit date, visit count
- Feedback ratings & comments

## SENDS OUT

- **Customer email** → **SendGrid (US) for campaigns**
- **Customer phone** → **Twilio (US) for SMS / WhatsApp**

**Key fact for lawyer:** the store dashboard is where **email and phone numbers leave the platform** to be sent through SendGrid (email) and Twilio (SMS / WhatsApp).

## MODULE 5 OF 6 · EXTERNAL PARTNER

# Tailor Portal

An independent stitching partner's account.

## COLLECTS

- Tailor's own profile + KYC (Aadhaar, PAN, address proof)
- Services & pricing
- Order updates & quotes
- Tailor's own consent flags

## RECEIVES CUSTOMER DATA

- **CUSTOMER NAME**
- **CUSTOMER PHONE**
- **BODY MEASUREMENTS (bust, waist, etc.)**
- Saree, fabric, occasion, budget
- Order status & due date

## SENDS OUT

- Quotes back to customer (via Wearify)
- Tailor may message customer via WhatsApp (out-of-platform)

**Important for the lawyer.** When a referral becomes a tailor order, the customer's **name, phone and body measurements** are visible to the tailor — an external partner. There is currently **no explicit "share with tailor" consent step**.

## MODULE 6 OF 6

# Admin — Mission Control

Wearify's own operations team.

## COLLECTS

- Store onboarding details (store owner KYC)
- Legal documents (privacy notice, terms, DPAs)
- Retention policies (currently defined, not enforced)
- Platform feature flags & config

## SEES & USES

- System-wide metrics (stores, devices, AI agents)
- Health, revenue, ticket views
- Can drill into individual store data
- Reviews tailor KYC documents

## SENDS OUT

- Doesn't directly send customer data externally
- Issues kiosk pairing codes to stores

**Key fact for lawyer:** Admin has the **broadest view** across the platform. Every customer record is reachable from here. Today there is **no audit log** recording what an admin views or does.

## WHERE DATA LEAVES THE PLATFORM

# Third Parties That Receive Customer Data

**RunPod**

United States · GPU

**FROM THE KIOSK MODULE**

Receives the **customer's body-scan photograph + the saree photo** (base64), runs the AI try-on, returns the result. No name, phone or ID is sent — only images.

**SendGrid**United States ·  
Email**FROM THE STORE MODULE**

Receives **customer email + name + the campaign message**. Only triggered when a store sends a campaign.

**Twilio**United States · SMS  
/ WhatsApp**FROM THE STORE MODULE**

Receives **customer phone number + the message body**. Used for OTP, SMS campaigns and WhatsApp campaigns.

**Tailor  
partners**Independent  
humans**FROM THE TABLET / TAILOR MODULES**

Receive **customer name, phone and body measurements** when a tailor order is placed. An external human recipient, not a SaaS.

QUICK REFERENCE

# Which Module Touches Which Data

| CUSTOMER DATA             | CUSTOMER PWA | KIOSK | TABLET | STORE | TAILOR | ADMIN |
|---------------------------|--------------|-------|--------|-------|--------|-------|
| Name & phone              | ✓            | ✓     | ✓      | ✓     | ✓      | ✓     |
| Email                     | ✓            | —     | —      | ✓     | —      | ✓     |
| Date of birth / age       | ✓            | ✓     | ✓      | —     | —      | ✓     |
| Body-scan photo           | —            | ✓     | —      | —     | —      | ✓     |
| Profile photo (face)      | ✓            | —     | —      | —     | —      | ✓     |
| Body measurements         | ✓            | —     | ✓      | —     | ✓      | ✓     |
| AI try-on images (looks)  | ✓            | ✓     | —      | —     | —      | ✓     |
| Visit history & behaviour | ✓            | ✓     | ✓      | ✓     | —      | ✓     |
| Loyalty points            | ✓            | ✓     | ✓      | ✓     | —      | ✓     |
| Consent flags             | ✓            | ✓     | —      | —     | —      | ✓     |
| Order & purchase data     | ✓            | ✓     | ✓      | ✓     | ✓      | ✓     |

✓ = module uses this data. ✓ = module captures, shares with external party, or holds the most sensitive form of this data. — = module does not touch this data.

## IN CLOSING

# What the Lawyer Should Know First

1

**The body scan is the most sensitive data we hold**

Captured at the **Kiosk**, stored on the customer record, sent to **RunPod (US)** for the AI try-on. We have no auto-delete or retention policy on it today.

2

**Tailor partners see customer name, phone and measurements**

When a customer's order is referred to a tailor, that information becomes visible in the **Tailor Portal**. No explicit "share with tailor" consent step exists today.

3

**There is no "delete my account" anywhere**

A customer cannot self-delete their data from the Customer Mobile App, the Kiosk, or anywhere else. Right to erasure (DPDP §12) is not implemented yet.

4

**Our age gate is 13+, but DPDP §9 wants 18+ (or verified parental consent)**

Customers aged 13–17 are accepted today with no parental-consent step. Counsel to advise on whether to raise the gate to 18 or build a parental-consent flow.

5

**Customer data goes to US-based services (RunPod, SendGrid, Twilio)**

Data-processing agreements need to be confirmed. The planned Azure-Central-India migration brings primary data residency back inside India.
